NEDERLANDS :

Lees voor uw veiligheid en voor het juiste gebruik van het apparaat deze instructies en waarschuwingen zorgvuldig door voordat u het apparaat voor de eerste keer installeert en gebruikt. Raadpleeg online en download de instructies voor uw product en de lijst met compatibele accessoires* (*afhankelijk van het model) op: www.avintage.com/gb

1. Installation and Getting Started

- Place your wine cellar in the room of your choice and unpack it. To ensure optimal operation, choose an open and ventilated location, away from direct sunlight or any source of heat or humidity. Optimal operation of the device is planned for an ambient temperature between 23°C and 25°C. Higher or lower ambient temperatures may affect the internal temperature of the device.
- Install your wine cellar on a flat and stable surface.

Make sure, if your cellar is placed between two pieces of furniture or in a corner against a wall, that the door opens sufficiently so that the shelves can be taken out. Some models require the doors to be opened more than 90° to pull out the shelves.

- Wait at least 24 hours before starting the appliance, in order to allow the refrigerant circuit to be perfectly efficient.
- Plug the power cord of your wine cellar into a wall outlet.

Net Niche Dimensions:
W 59,2 x D 55,6 x H 88,4 cm

Net Product Dimensions:
W 56 x D 55 x H 87,8 cm

2. Temperature setting

- Adjust the temperature inside your cellar using the digital control panel. Adapt the temperature setting, between 5°C and 18°C for upper and lower compartment, depending on the type of wine stored in your cellar.
- The temperature selected for the upper compartment must always be lower than the temperature selected for lower compartment.
- To optimize the operation of the appliance, it is important to set the temperatures respecting a difference of 10°C maximum between the upper and lower compartment.
- Avoid repeated opening of the door so as not to disturb the temperature setting of your bottles.
- Depending on the number of bottles loaded and their temperature, a period of 24 to 48 hours may be necessary to stabilize the temperature setting inside the cellar.

To switch the wine cellar on or off, press buttons 1 and 2 simultaneously.

- Lighting ON / OFF key, turn on or off.
- Press 5s to switch temperature unit °C / °F.
- Compartment selecting switch (lower or upper one).
- Temperature display.
- Key to increase the set temperature by 1°C.
- Key to decrease the set temperature by 1°C.

3. Capacity and Storage

- Supplied with 4 wooden shelves, the cellar can store up to 51 Bordeaux 75cl bottles.
- The advertised capacity is measured according to the EN62552 standard. This standard is calculated with 75cl bottles of the traditional Bordeaux type. Any other type of bottle format as well as the addition of shelves will considerably reduce the storage capacity.
- The maximum capacity is calculated with a defined number of shelves which varies according to the models.
- The interior configuration of the cellar can, for certain models, be personalized. The list of available and compatible accessories can be viewed on the website: www.avintage.com

4. Maintenance and Cleaning

- Regularly clean your wine cellar. Unplug the appliance then clean it with a mixture of warm water and mild detergent. Rinse with pure water, let dry completely before reconnecting. Do not use solvents or abrasive agents.
- Change the filter every year if your cellar has one.
- The interior LED lighting cannot be changed by the consumer. The lifetime of these LEDs is normally sufficient for no changes to be made. If however, the LEDs were defective, please contact your after-sales service for any intervention.
- In the event of an error code on your screen or a breakdown, contact the after-sales service. Aesthetic and functional spare parts in accordance with REGULATION (EU) 2019/2019 (Annex II, point 3.), are made available for a period of 10 years. The manufacturer's warranty is 1 year for functional parts.
