Built for Marathons

Lighter Actuation, No Unwanted Clicks

When rear buttons or paddles are directly underneath the fingers, such controllers are prone to have inadvertent clicks, and thus heavier actuation force must be implemented for prevention. Moving rear buttons to the center makes lighter actuation feasible, resulting in **less hand strain over time, and eliminates unwanted clicks.**

Less Weight

At 300g, much like the trend for gaming mice, the lightweight construction makes the Raikiri Pro **comfortable to game on over prolonged periods of time, minimizing wrist pain.**

More Grip

The ergonomic hand grips are thinner with a flatter arc to cater to varying hand-sizes. The **Micro-dot design increases the friction** for a firm grip while providing an **easy-to-clean surface**, as opposed to rubber which most controllers are moving away from due to possible stickiness over time.

Easy Identification

The **angled surface** in conjunction with the **cross stripes** make each rear button easy to find.

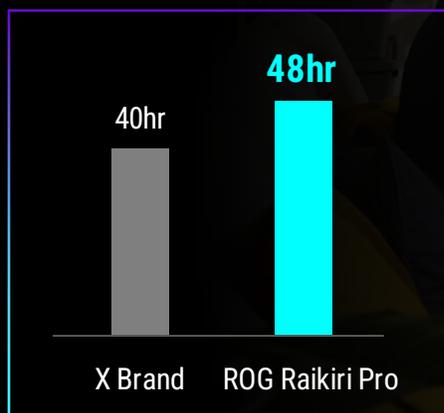

Always Connected

With tri-mode connection, the Raikiri Pro is the perfect companion for the PC, laptop, or the new Ally.

The wireless 2.4GHz receiver is safely stored in the back of the Raikiri Pro so it can be carried with you without getting lost easily.

With up to 48 hours* of battery life, going wireless means more fun, not frequent charging.

Built-in OLED Display

Get creative and **add a custom image, animation or text** on the built-in OLED display in Armoury Crate. Use it to **switch profiles on the fly** or to **view the current controller profile, charging and power status, or mic status**.

Two buttons above the OLED display (see above) can be used to **switch between controller profiles and connection modes**. When connecting a USB-C cable, Raikiri Pro switches to wired mode automatically.

* More info on how to use the OLED on P.20-21

Sure-Fire Rear Buttons

The rear buttons are always comfortably within reach whenever the occasion calls for it. **Program the buttons as hotkeys for complex in-game commands, or use them to tweak joystick sensitivity on the fly for greater levels of control.**

Customizable Step Triggers

The left and right triggers offer a full range of motion and include a short trigger lock mode. Trigger dead zones can be customized via Armoury Crate to suit user preference.

Premium Audio

Plug a headset into the 3.5 mm jack for **premium, true-to-life audio**, powered by the **built-in ESS DAC**. Mute button for voice chat on/off is available.

* When a 3.5mm headset is connected, the microphone is muted by default. You may unmute it by pressing the mute button.
* Headset connection is only available in wired mode.

The ROG Spirit

The cyberpunk-inspired translucent design, floating logo and custom light effects on the Raikiri Pro reflect the **ROG spirit**.

Bold translucent design

Customize it Your Way

The Armoury Crate app allows you to remap buttons, adjust OLED display settings, select controller profiles, and set up low-battery alerts for wireless mode. You can also tweak vibration strength and trigger dead zones, and adjust joystick response curves.

* Armoury Crate can only be accessed on PC or ROG Ally via wired mode.

** PC & Xbox profile settings must be set up on the PC via wired mode then saved in the onboard memory

Highly Customizable

Response Curve

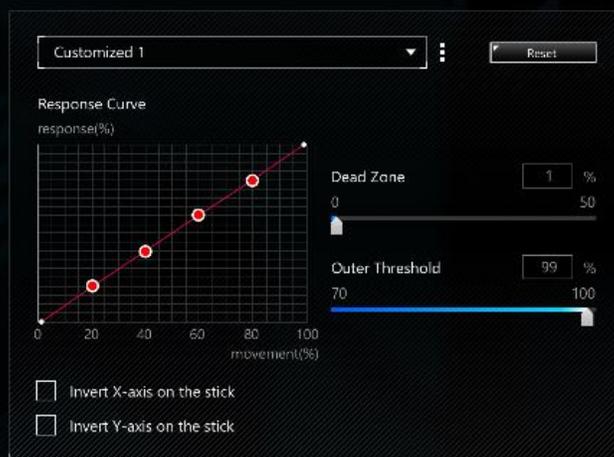

Gamers configured to a specific relationship between the thumbsticks movement and response value, so that they can adapt to different games and weapons.

Deadzone Settings

With a dead zone on the trigger, gamers can lightly press in this area without actuation being registered.

Key Assignments

Remap your reload or jump to the rear buttons can facilitate your fingers, let you perform multiple actions without taking your thumbs off the analog joysticks

* Refer to the [ROG Raikiri Series Tutorial Video](#) for the further details.

** Please refer to P.27-32 for customizing settings instructions

OLED Display

Create personalized animation, image or text

Haptic Feedback

Adjust the vibration strength to bring more immersion in games.

RGB Lighting

Personalize or synchronize with other ROG Gear

The screenshot displays the ROG Aura Creator software interface, which is used for customizing ROG devices. The interface is divided into several sections:

- OLED Display:** This section allows users to create personalized animations or text. It features two panels. The top panel shows a scrollable list of ROG logos and a text input field with the text "REPUBLIC OF GAMERS". The bottom panel shows a scrollable list of custom animations and preset animations.
- Haptic Feedback:** This section shows a central image of a ROG controller with vibration strength sliders for the left and right sides. The left side has sliders for "Top" and "Bottom" both set to 100%. The right side has sliders for "Top" set to 50% and "Bottom" set to 100%.
- RGB Lighting:** This section offers various lighting effects and color options. Under "Basic Effects", there are icons for Static, Breathing, Color Cycle, Reactive, Rainbow, and Comet. Under "Advanced Effect", there is an "AURA Creator" button. A "Color" section on the right shows a color palette with three options: "Low - Red", "Medium - Blue", and "High - Green".

Q1: Was the Raikiri Pro designed to be lightweight?

A: According to a comprehensive survey with numerous power users, we found that 270-330g is the most comfortable range for prolonged periods of time to avoid wrist pain. In addition, the trend in gaming mice is clearly evident, so lightweight construction was a key focus from inception. With that in mind, we also ensured the construction is highly durable, the Raikiri Pro was able to withstand drop tests on each side from a height of 1.25 m onto steel surface.

Q2: Does the micro-dot design have an advantage over rubber?

A: The Micro-Dot design increases the friction for a firm grip even with sweaty hands, while providing an easy-to-clean surface, as opposed to rubber which most game controllers are moving away from due to possible stickiness over time, especially in regions with humid climate.

How to adjust settings of joystick?

- 1 Set up your controller on Armoury Crate software – please choose ROG Raikiri Pro, visit “settings” page, and select “Stick”.

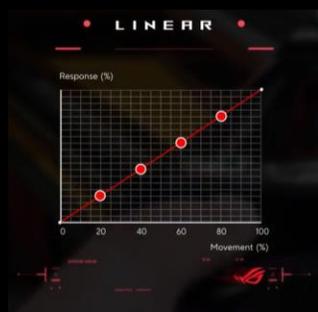

- 2 You can choose customizable curves – There are 3 preset curves and 2 additional sets for your own customized curves.

* Refer to the [ROG Raikiri Series Tutorial Video](#) for the further details.

How to adjust settings of joystick?

- 3 Rapid/Linear/Gentle– There are 3 preset curves and 2 additional sets for your own customized curves.

- **Linear:** Move/Aim at the same rate as the navigating stroke if the joystick
→ Frequently used for games you're controlling the camera view or character moving

- **Gentle:** Move/Aim within a fine input range of the joystick
→ is great for aiming but hard to keep up with a fast target.

- **Rapid:** Faster and more responsive Move/Aim
→ Instantly responsive, but hard to control when just starting out

* Refer to the [ROG Raikiri Series Tutorial Video](#) for the further details.

How to adjust settings of joystick?

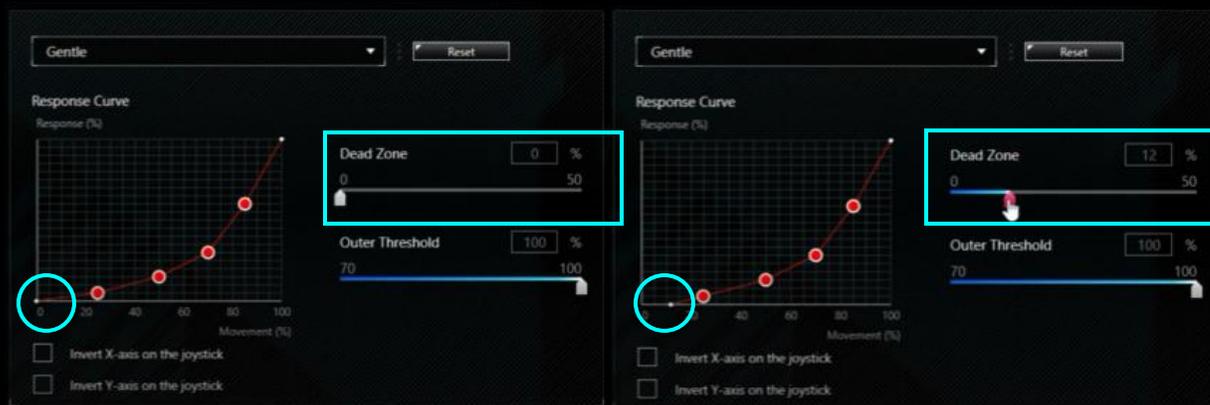

- 1 Dead Zone:** Defines circular boundary where the joystick can move freely without any input registered

Applying little or no dead zone for most precision in games, but except for racing. Without a dead zone, every movement is making you drift from side to side.

Applying dead zone of 12% means that no input will be registered unless the joystick moves at least that much from the center.

- 2 Outer Threshold:** Same idea as dead zone, except it applies to the outer limits of the joystick's movement.

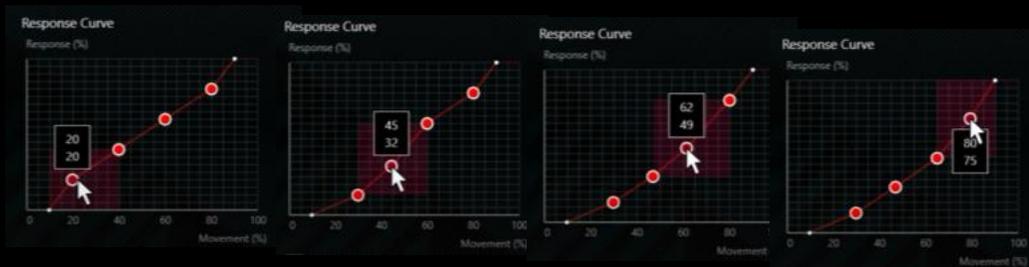

If the outer threshold set to 90%, the maximum input can be reached as soon as the joystick moves at least 90% from the resting position as opposed to the usual 100%.

* Refer to the [ROG Raikiri Series Tutorial Video](#) for the further details.

How to adjust settings of joystick?

- 3 Main Curve:** You can also shift 4 plots on the curve if you wish to try larger values for Dead Zone and Outer Threshold.

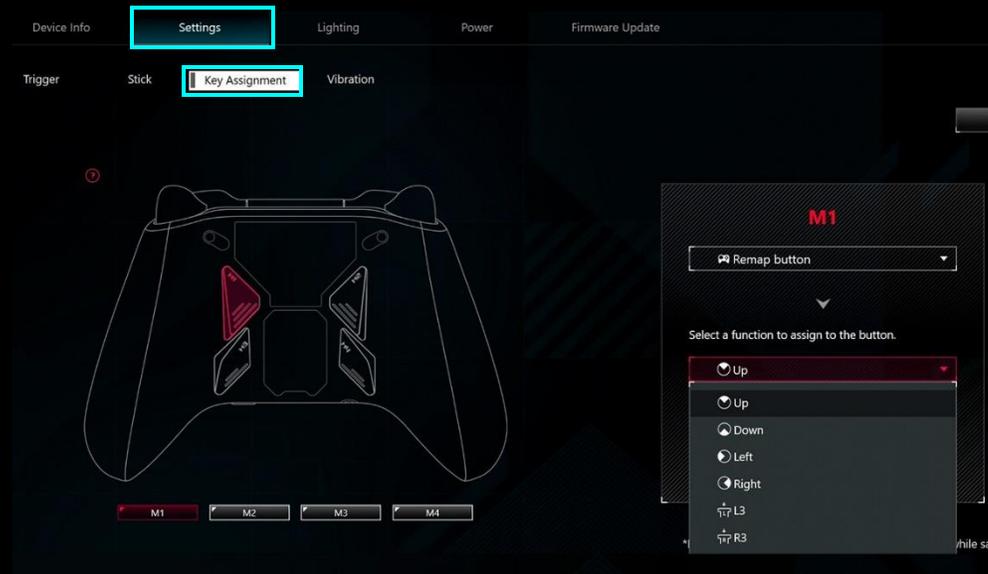

- 4 Invert X or Y axis:** Most games provide the option of inverting the X or Y axis, especially flight sims and FPS. These settings are here in case the games don't have them or force you to play inverted.

- Invert X-axis on the stick
- Invert Y-axis on the stick

* Refer to the [ROG Raikiri Series Tutorial Video](#) for the further details.

How to adjust settings of rear buttons?

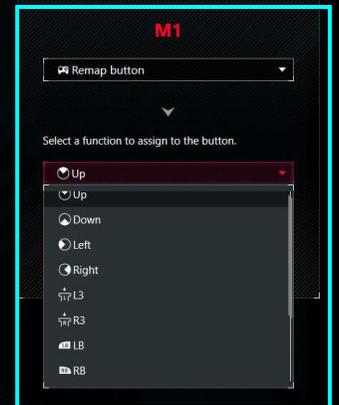

- 1 Set up your controller on Armoury Crate software – please choose ROG Raikiri Pro, visit “**settings**” page, and select “**Key Assignment**”.

* Refer to the [ROG Raikiri Series Tutorial Video](#) for the further details.
