- Can be used with a tripod with a 1/4" nut interface (tripod must be purchased separately).

Compatibility:

For all smartphone

DESCRIPTION:

FACECAM is a smart phone holder designed to take your video recording and streaming to the next level. It uses 360° facial recognition to track your movements and keep you perfectly framed.

No app needed – just pair it with the included Bluetooth remote to control your shots, and use gesture control to start and stop recordings with a simple hand wave.

It supports both horizontal and vertical shooting at 360°, with 180° front and rear framing. You can also adjust the camera vertically for different angles. The top part of the holder is removable, turning it into a standalone phone holder, giving you even more flexibility for your shoots.
